Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration

CENTRAL REGION ELEME (Continued) **S110445638**

Completed Date: 08/06/2009
Comments: Copies of the Inital Study and draft Negative Declaration forwarded to the SCH on 8/6/2009.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 03/02/2010
Comments: Final Negative Declaration signed by J. Hinojosa on 2/26/2010.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 02/25/2013
Comments: Fully executed O&M agreement sent (FedEx) to District.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil
Completed Document Type: Certification
Completed Date: 01/27/2014
Comments: DTSC has determined that all appropriate remedial actions have been completed; however, the site requires ongoing operation and maintenance for the subsurface gas mitigation system. LAUSD will continue operation and maintenance of the subsurface gas mitigation system in accordance with the DTSC-approved Operation and Maintenance Plan. Further action for groundwater that originates from off-site is being coordinated with the Los Angeles Regional Water Quality Control Board. Monitoring at the site indicates that potential off-gassing from contaminated groundwater does not currently post an exposure risk to school occupants.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 11/30/2012
Comments: DTSC reviewed LAUSD notification and follow-up. Issued was addressed. DTSC did not have any comments.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 02/08/2013
Comments: DTSC concurs with recommendation to continue quarterly monitoring, without changes. Please incorporate th information into the next Quarterly Operation and Maintenance Report.

Comments: Not reported

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 08/18/2010
Comments: DTSC approves this Revised RACR. Soil contaminated with petroleum hydrocarbons and vinyl chloride was excavated from four areas, BH-1, BH-10, BH-26, and SGP-3. Confirmation soil and soil vapor sampling confirmed remedial action objectives were met. RACR for second phase of remedial activities should include: (1) abandonment of off-site vapor probes, SGP-41, SGP-42, and SGP-43, (2) installation and baseline sampling of soil vapor probes for Area SGP-3, (3) installation and baseline sampling of groundwater monitoring wells, (4) construction and start-up of gas mitigation system, and (5) finalization of Operation and Maintenance Plan and associated agreement.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 06/29/2012
Comments: DTSC concurs with conclusions and recommendations and approves the RACR with the following conditions: (1) an Operation and Maintenance Plan is approved by DTSC; (2) an Operation and Maintenance Agreement between LAUSD and DTSC is executed; (3) outstanding modification to the HVAC system will be completed prior to t start of school on August 14, 2012. The following conclusions are provided in the RACR: (1) the gas mitigation system is substantially complete and has been

CENTRAL REGION ELEME (Continued) **S110445638**

constructed in accordance with the DTSC-approved Remedial Design; (2) gas mitigation measures are intended to reduce potential risks to acceptable levels; and (3) start-up testing demonstrated that methane, hydrogen sulfide, and volatile organic compounds were not detected above site-specific action levels. The RACR recommends that the Site be certified safe for occupancy and that routine inspection and monitoring be conducted in accordance with the Operation and Maintenance Plan being finalized.

Completed Document Type: Fieldwork
Completed Date: 06/29/2012
Comments: Construction of the school and the integrated gas mitigation system were completed on June 29, 2012.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/30/2012
Comments: Field work associated with Startup Workplan complete. Final DTSC letter not needed. Activities will be documented in the Gas Mitigation System Start-up Testing Report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 06/29/2012
Comments: The final version of the Gas Mitigation System Start-up Testing Report was included as Appendix O in the Final Remedial Action Completion Report approved on June 29, 2012.

Completed Area Name: Lot 6 - School

CENTRAL REGION ELEME (Continued) **S110445638**

Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 01/31/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 01/31/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 03/21/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance Report for First Quarter 2013.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/01/2013
Comments: The report indicates that the past four quarters of monitoring have demonstrated that volatile organic compounds in groundwater do not pose a health risk to occupants of the Site. The report also recommends that future groundwater monitoring be assumed by others under oversight of the Los Angeles Regional Water Quality Control Board (LA-RWQCB). DTSC concurs with the conclusions and recommendations and hereby approves the report. Additionally, DTSC is coordinating referral of additional investigation and cleanup of off-site groundwater contamination extending beneath the Site to LA-RWQCB under Cleanup and Abatement Order No. 98-125.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Groundwater
Completed Document Type: Technical Report
Completed Date: 11/28/2012
Comments: DTSC reviewed the "Report Documenting Results of Off-site Investigation Activities, Northern Portion of Lot 6, Track 49104 (School Site), Playa Vista, California, Site Id No. 2403W00," prepared by Cam Dresser & McKee, Inc. (CDM) on behalf of Playa Capital Company, LLC, dated May 2, 2011, under the direction of the Regional Water Quality Control Board (RWQCB), Los Angeles Region. Based on review of the report, DTSC forwarded a letter to update the RWQCB about the activities and findings of quarterly groundwater and soil gas monitoring conducted at Playa Vista Elementary School (formerly Central Region Elementary School No. 22) under DTSC oversight. This information, from the school site, may help RWQCB evaluate any future action for off-site groundwater contamination, located north of the school site. Off-site groundwater contamination is being addressed by Playa Capital Company, LLC, pursuant to RWQCB Cleanup and Abatement Order No. 98-125.

Completed Area Name: Lot 6 - School

CENTRAL REGION ELEME (Continued) **S110445638**

Completed Date: 01/31/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 01/31/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance report. Further, in an email dated January 11, 2013, DTSC concurred with the recommendation to discontinue monitoring of SV-6 and SV-7 during the monitoring events scheduled for January and April 2013 based on the following considerations: Collection of soil gas samples from soil gas probes at SV-6 and SV-7 has been difficult due to the presence of high vacuum and water in the probes. The next two monitoring events in January and April 2013 are scheduled during the rainy season, it is very likely that high vacuum and water will continue to prevent the collection of soil gas samples from SV-6 and SV-7. Air samples from vent risers beneath school buildings are monitored quarterly for VOCs to comply with the applicable permit from South Coast Air Quality Management District. However, DTSC recommends that LAUSD continue to inspect and maintain soil gas probes SV-6 and SV-7. DTSC also recommends that LAUSD attempt to collect soil gas samples from SV-6 and SV-7 during a drier season, in July 2013. If samples cannot be collected due to high vacuum and water, LAUSD may consult with DTSC to determine if soil gas sampling of SV-6 and SV-7 may be discontinued.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 01/31/2013
Comments: In general, DTSC concurs with the conclusions and recommendations and hereby approves the Operation and Maintenance report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 06/07/2012
Comments: DTSC has no comments since the proposed alternative enhanced ventilation design will comply with the requirements in the Los Angeles Department of Building and Safety Standard Plan for Methane Hazard Mitigation. Please incorporate this information into the Remedial Action Completion Report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil

CENTRAL REGION ELEME (Continued) **S110445638**

Completed Document Type: Operations and Maintenance Report
Completed Date: 04/01/2014
Comments: On December 10, 2013, DTSC concurred by email with the following recommendations provided in the report: Action Item 2: Los Angeles Unified School District recommended reprogramming the gas mitigation system (GMS) detection system so that HVAC enhanced ventilation is only activated in the event of a high level gas alarm. DTSC concurred with this change based on the layers of protection provided by the GMS, consideration of more energy efficient operations, and consistency with other Los Angeles Unified School District schools. Action Item 6: Los Angeles Unified School District requested DTSC approval to discontinue monitoring two soil gas probes, SV-6 and SV-7, for volatile organic compounds. DTSC concurred with this change due to the continuing problem of encountering water in the probes. This is consistent with discussion in previous Operation and Maintenance Reports. With this change, DTSC recommended that Los Angeles Unified School District evaluate the possibility of periodically analyzing samples from the sub-slab sample piping for volatile organic compounds. DTSC concurs with the remaining conclusions and recommendations and hereby approves the report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil
Completed Document Type: Operations and Maintenance Report
Completed Date: 04/01/2014
Comments: As operation and maintenance activities continue, DTSC recommends incorporating the following items in future reports: 1. Section 4.3.6.2, Building Sub-Slab Monitoring (volatile organic compounds or VOCs): Low levels of acetone, carbon disulfide, dichlorodifluoromethane, and toluene were detected in sub-slab air samples. These compounds were detected just above the method detection limits and do not pose a risk. In the future, it would be helpful to explain these detections in the context of common laboratory contaminants, blank samples, and laboratory control samples. 2. Section 4.3.6.1, Probes SV-1 to SV-5 (Methane and Hydrogen Sulfide), page 23: Methane concentrations detected in soil gas probes SV-3 and SV-5 have increased. DTSC understands that these concentrations are consistent with methane detected on-site during the Supplemental Site Investigation conducted in 2008. In the future, it might also be helpful to explain these results in the context of associated low oxygen levels and concentrations of methane detected in samples collected from associated passive vent risers. DTSC recommends evaluation of associated passive vent risers to verify connectivity and to maximize efficiency of passive venting. On February 24, 2014, DTSC concurred by email with the following recommendations provided in the report to help Los Angeles Unified School District (LAUSD) plan for the next operation and maintenance event: Section 1.6, Approved Modifications to the O&M Program, page 4: LAUSD implemented analysis of samples from sub-slab probes for volatile organic compounds (VOCs). LAUSD proposes continuing this sampling on a quarterly basis for one year or until data confirm that VOCs in groundwater are not migrating upwards and collecting beneath the Administration/Library/Classroom Building. At that point, the data should be assessed, in consultation with DTSC, to determine if changes are needed. Section 6.2, Recommendations, New Action Items, page 35: LAUSD recommends reducing the frequency of gas detection sensor calibration and related functional tests from quarterly to

CENTRAL REGION ELEME (Continued) **S110445638**

semi-annually, starting with the operation and maintenance event for the first quarter of 2014. This change is consistent with operation and maintenance of gas mitigation systems at other school sites. Additionally, the sub-slab gas detection probes are being used under relatively clean conditions (non-industrial) and sensor transmitters have self-diagnosing electronics that will automatically identify and alert the operator of critical faults. Periodic calibration will still be conducted to correct for sensor drift. DTSC concurs with the remaining conclusions and recommendations and hereby approves the report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil
Completed Document Type: Operations and Maintenance Report
Completed Date: 04/23/2014
Comments: This Operation and Maintenance Report for first quarter 2014 adequately addresses DTSC recommendations forwarded in the April 1, 2014 approval letter for the previous quarterly report, "Operation and Maintenance Report, Fourth Quarter 2013." Further, DTSC concurs with the conclusions and recommendations and hereby approves the report.

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/22/2014
Comments: DTSC has determined that the conditions provided in the DTSC conditional approval letter for the RACR, dated June 29, 2012, have been adequately addressed. Based on this information, the status of the site will be changed to certified with operation and maintenance. LAUSD will continue operation and maintenance of the subsurface gas mitigation system in accordance with the DTSC-approved Operation and Maintenance Plan. Further action for contaminated groundwater that originates from off-site is being coordinated with the Los Angeles Regional Water Quality Control Board. Monitoring at the site indicates that potential off-gassing from contaminated groundwater does not currently pose an exposure risk to school occupants.

Completed Area Name: Lot 6 - School

Completed Document Type: Operations and Maintenance Report
Completed Date: 06/17/2015
Comments: Not reported

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil
Completed Document Type: Operations and Maintenance Report
Completed Date: 06/17/2015
Comments: Los Angeles Unified School District incorporated DTSC recommendations for Action Items 14 and 15 forwarded by email on November 14, 2014. As a result, DTSC concurs with the conclusion that based on results of inspection and monitoring presented in the document, the Site remains safe for continued use by school occupants. DTSC also concurs with the recommendation that inspection and monitoring of the gas mitigation system should continue in accordance with the DTSC-approved Operation and Maintenance Plan and approved modifications.

Completed Document Type: Operations and Maintenance Report
Completed Date: 06/17/2015
Comments: The report, Playa Vista Elementary School 1st Quarter 2015 Gas Mitigation System Inspection Report, dated May 14, 2015, summarizes alarm history, incidents, and maintenance activities, for the gas mitigation system during the first quarter of 2015. The contents of this report are concise and useful to track operation and maintenance of the system. DTSC understands that this information will be included in the next Semi-Annual Operation and Maintenance Report. DTSC does not have additional comments on the document.

Completed Document Type: Technical Workplan
Completed Date: 06/23/2015
Comments: RWQCB provided conditional approval of the "Performance Monitoring and Contingency Plan" following notification from that DTSC has no additional comments at this time. In the conditional approval letter, RWQCB specified, in Item 4, "The Regional Board concurs with Playa's contingency proposed in the response to DTSC comments dated May 7, 2015. The source of the groundwater contamination at the Site remains unidentified. First quarter 2015 groundwater analytical results for OSS-EW-1 indicate a cis-1,2-dichloroethene (cis-1,2-DCE) concentration of 970 micrograms per liter (ug/l) and a vinyl chloride concentration of 20 ug/L, above their respective California Title 22 Maximum Contaminant Levels (MCLs) of 6 u[g]/L and 0.5 u[g]/L. In addition, the PMCP and Playa's May 7, 2015 response estimate a very low pumping rate of 0.25 gallons per minute (gpm) or less from the one well system. Therefore, if concentrations of COCs do not decline within the OSS monitoring well network, then additional site investigation, additional groundwater monitoring wells, and/or additional extraction wells, may be necessary to address groundwater contamination at the Site."

Completed Area Name: Lot 6 - School
Completed Sub Area Name: Soil
Completed Document Type: Fieldwork
Completed Date: 08/13/2015
Comments: Field activities for Semi-Annual Operation and Maintenance Activities was conducted on 8/6/15 (functional testing of gas mitigation system and soil gas probe monitoring), 8/11/15 (passive vent riser monitoring and sub-slab sampling), and 8/14/15 (active vent riser monitoring). DTSC provided oversight on 8/6/15 and 8/11/15. This is the first monitoring event with LAUSD's new consultant, Clark Seif Clark.

Completed Area Name: Lot 6 - School

Local Agency:	Not reported
RB Case Number:	0379
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	1,4-Dioxane, Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The Site is a 9-acre commercial property located at the southwest corner of Aviation Boulevard and Arbor Vitae Street within a mixed commercial and residential area of Los Angeles, California. From the mid-1950s to the early 1990s,the Site was used as an aerospace manufacturing facility for the production of turbochargers and heat exchangers for aircraft and other vehicles. During that period there were four industrial buildings, underground storage tanks (USTs), solvent degreasers and clarifiers. In 1996, the buildings, USTs, degreasers and clarifiers were demolished and the property was sold to the Hertz Corporation (Hertz). The Site was redeveloped into a receiving yard for rental vehicles. Current operations include routine vehicle maintenance and car washing. Due to the former aerospace operations, soil, soil vapor and groundwater have been impacted with halogenated volatile organic compounds (VOCs) including primarily tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (1,1-DCE); and 1,4-dioxane. Petroleum hydrocarbon-related VOCs including benzene, toluene, ethylbenzene and xylenes (BTEX) are also detected in groundwater but are attributed to an offsite upgradient source. The Site lies within the West Coast Groundwater Basin of the Los Angeles Coastal Plain. According to the California Department of Water Resources (DWR) Bulletin 104, the Site is underlain by non-marine alluvial sediments of the Upper Pleistocene Lakewood Formation, which includes unconsolidated coarse-grained sands and gravels of the Semiperched aquifer and poorly sorted sands, silty clays and clays of the Bellflower aquiclude. The Bellflower aquiclude is underlain by the Gage aquifer, which extends from approximately 140 to 200 feet below ground surface (bgs) and consists primarily of fine-to medium sand with variable amounts of gravel, sandy silt and clay. The Lakewood Formation is underlain by alluvial and marine deposits of the San Pedro Formation, which includes the Lynwood Aquifer (290-340 ft bgs) and the Silverado Aquifer (420-620 ft bgs). Subsurface lithology generally consists of interbedded sand, silty sand, silt and clay from the surface to 140

GARRETT THERMAL SYSTEM (Continued) **S104549281**

feet (ft) below ground surface (bgs), the total depth investigated. Groundwater at the Site occurs within discontinuous, perched fine-grained sand zones at 55 to 65 ft bgs primarily in the northwest, eastern and southern portions of the Site and within a laterally continuous sandy zone extending from approximately 92 to 96 ft bgs, which may coincide with the upper Semi-Perched aquifer of the Lakewood Formation. Groundwater flow within the Semi-Perched aquifer zone is generally toward the east and southeast with relatively shallow gradients of 0.0004 to 0.001. The Site has been under environmental investigation since 1989 and under Regional Board regulatory oversight since 1995. During the 1990s, ENSR Consulting and Engineering conducted multiple Site investigations including soil investigations, soil vapor surveys and installation of six groundwater monitoring wells (MW-1 through MW-6). In 2001, Parsons Engineering installed 16 soil vapor monitoring points (SVP-1 through SVP-16) and a groundwater monitoring well (MW-7). Based on results of these investigations, three main areas of the Site were identified with relatively high levels of VOCs in the vadose zone. In 2004, Montgomery Watson Harza installed four groundwater monitoring wells (MW-8 through MW-11), 26 shallow soil gas probes (SG-1 to SG-26) and evaluated vapor intrusion risk. In 2005, Mactec installed five soil vapor monitoring points (SVP-17 through SVP-21) to further investigate vadose zone lithology. Pilot tests conducted in 1993, 2002 and 2006 were used to evaluate SVE as preferred cleanup method for soil. In 2006, Mactec conducted limited SVE remediation as part of an interim remedial action approved by the Regional Board. Currently, there are seven groundwater monitoring wells screened in the perched zone and 23 monitoring wells screened in the upper Semi-Perched aquifer. Semi-annual groundwater monitoring has been conducted since 1993. Groundwater sampling at the Site is conducted using the Snap Sampler method, which has previously been approved and incorporated into the groundwater monitoring program. Results from historical site investigations and groundwater monitoring to date indicate that groundwater characterization within the perched zones and Semi-Perched aquifer beneath the Site is essentially complete. However, based on historical and recent groundwater monitoring data, the lateral and vertical extent of dissolved-phase VOCs and 1,4-dioxane in groundwater upgradient and downgradient has not been fully delineated and the onsite vertical extent of contamination has not been evaluated. During the Fall of 2014, Honeywell plans to conduct an investigation to assess groundwater impacts (if any) from potential offsite sources and to further delineate the lateral and vertical extent of VOCs and 1,4-dioxane in groundwater offsite. Regional Board staff is currently in the process of reviewing a remedial action plan (RAP) for soil. Based on the site lithology, the contaminants of concern (primarily VOCs) in soil and soil vapor, Honeywell is proposing the use of soil vapor extraction (SVE) as the primary remedy for soil remediation. Once the soil remediation is under way and groundwater characterization is complete, Honeywell will start evaluating remedies for the treatment of groundwater impacted with VOCs and 1,4-dioxane.

Case Worker:	RO
Local Agency:	Not reported
RB Case Number:	0730
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Other Metal
Site History:	The site was formerly used for degreasing operations, plastic extrusion and furniture distribution between the 1940s and the early 1990s. The industrial buildings were demolished in 1993 and since that time, the Site has been used for rental car parking. A Soil Vapor Extraction (SVE) system has been operational at the Site since November 3, 2004, to address chlorinated solvent contamination detected in soil beneath the Site during prior assessments. A different SVE system had operated at the Site between August 25, 1999 and April 28, 2000, after which it was shut down. Soil and groundwater investigations have been in progress at the Site since 1997 under the oversight of the Regional Board. Based upon the information provided in the technical reports submitted to the Regional Board, the previous chemical use, storage and/or disposal practices at this Site during former manufacturing, degreasing and spray painting operations have contaminated the underlying soil and groundwater. The potential source areas identified in prior studies include the cinder block vault area, former degreasing room, and former spray painting areas, two former manholes, former hydraulic lift tank, a former clarifier and an east-west trending drainage line. The Volatile Organic Compounds (VOCs) present in groundwater beneath the Site, at concentrations above their respective Maximum Contaminant Levels (MCLs) established by the California Department of Health Services, have degraded the beneficial uses of the States groundwater resources.

Description:	As part of a scheduled maintenance period, the West Basin Municipal Water District shut down a pump at the Hyperion Treatment Plant. The shut down resulted in a wastewater blow off from an air-vac. The secondary treated wastewater then entered a storm drain which leads to the Santa Monica Bay. The city has a catch basin, therefore, the material is not expected to reach the bay. On-site personnel shut off a valve shortly after the release began, stopping the release. A mop up of the impacted surface area has been completed. The release to the storm drain was unrecoverable.

Description:	Considerable amount of fluid leaked out of a garbage truck infront of 4 residences. The city sent out a team and spread absorbant on the oil but has not returned to remove the absorbant and the absorbant is being blown and the oil has not been compleetely absorbed. If it rains the material will go down a storm drain which is 30 feet away from the substance. At this point the cars in the area are coated with dust from the absorbant it is also causing a smell and there are children riding bikes in the area.
